An adult person has 206 bones. Babies are born with as many as 270 small, soft bones, but as a child grows, some of the bones join together. The largest bone is the femur, or thigh bone, which can be 50 cm long in a tall man. The smallest bone, the stapes, is in the middle ear and is about 3 mm long.

17 Aug 2017 . To house the bone marrow, the main source of blood formation in humans. To serve a source of calcium for the entire body. Without bones, we would have no "structural frame" for our skeleton, be unable to move our skeleton, leave our internal organs poorly protected, lack blood and be short on calcium.
